

MAST PACKING FOR YACHTS IN TRANSIT

P & M Packing is now firmly established in the race boat market as the mast packing company of choice. Having packed masts for some famous globe-trotting race campaigns such as Leopard of London, Pindar, Titan XII and RAN II, P & M Packing's reputation has spread.

Down time is not an option with the tight schedules that these racing yachts have to operate within and one small crack or breakage could mean having to pull from an event or missing a weather window for a record attempt.

The unique mast packing system, developed by P & M Packing, is suitable for either aluminium or carbon masts and is made up from a combination of packing materials to create a lightweight, yet robust protection for these delicate, valuable spars. Strengthening is reinforced around lifting points and integral support cradles are built around the packed rig, which provides protection whether in transit or storage.

This specialised system for packing masts and spars of all sizes can be undertaken by the mast packing team from P & M Packing, on the dockside where the rig is pulled out of the boat.

This system offers a greatly reduced risk to a vulnerable rig, which could be damaged while being loaded or in transit. Pricing can be reduced with more than one boat needing this service – telephone or email P & M Packing for a quotation.
